# QUIDO HUBA

M.Sc. Software Engineering

+45 78 80 50 37 • quido.huba@gmail.com • Odense, Denmark • Slovak citizen

I've always been curious about how things work. I enjoy the research side of engineering, digging into a problem until I understand it, and then using that knowledge to build software that works. I recently graduated from the University of Southern Denmark and have hands-on experience with C#/.NET, Python, TypeScript and React. I'm early in my career and very motivated to join a team and be part of something meaningful.

## SKILLS

- **Languages:** C#, Java, Python, TypeScript, JavaScript, PHP, SQL
- **Frameworks and tools:** .NET Core, React, Node.js, Laravel, Tailwind CSS, Docker, Git, SQL Server, PostgreSQL, MySQL, Linux
- **Data and ML:** pandas, NumPy, SciPy, scikit-learn, Matplotlib, signal processing
- **Practices:** Object-oriented design, design patterns, full-stack development, REST APIs, Agile / Scrum, model-based development
- **Spoken languages:** Czech and Slovak (native), English (C1), German (B2), Danish (basic, actively learning)

## WORK EXPERIENCE

**Folkaet: Full-Stack Developer** **2025 – Present**

- Develop features for a matchmaking web app in React and TypeScript, from design through code review to release.
- Work on the Python backend and take responsibility for features from start to finish, including fixing issues before releases.
- Part of a small agile team with weekly planning and reviews, where I plan and prioritise my own tasks and help colleagues when needed.

**Alfa IT s.r.o.: Software Developer** **2023 – 2024**

- Developed and maintained an internal information system in C# and .NET Core with object-oriented design, used daily by both employees and customers.
- Improved SQL Server schemas and queries to support new business requirements.
- Worked closely with users of the system and turned their feedback into new features and better stability.

**Maquita s.r.o.: IT Technician & Web Developer (Part-Time)** **2018 – 2024**

- Ran a Linux server with Plesk hosting several live websites, handling DNS, mail, SSL, backups, migrations and outage recovery.
- Built and maintained websites and WordPress installations, and secured them after repeated attacks.
- Main contact for IT in the company, covering network setup, hardware and day-to-day support.

## EDUCATION

**University of Southern Denmark: M.Sc. Software Engineering** **2024 – 2026**

- Thesis: "Estimating Change in Blood Flow from Cardiopulmonary Resuscitation based on Photoplethysmography and Inertial Measurement Data". Built a Python pipeline (NumPy, SciPy, pandas, scikit-learn) to synchronise, resample and filter PPG and IMU sensor data from clinical monitoring equipment and estimate blood flow change during CPR.
- Completed five applied research projects, including one in collaboration with Danish logistics company DAO.
- **Relevant coursework:** Software Architecture, Model-Based Software Development, IoT Software Engineering, Big Data, Cybersecurity, Data Security & Privacy, Deep Learning in the Medical Domain, Data Visualization, Engineering of Innovative Software, Research in Software Engineering.

**Brno University of Technology: B.Sc. Information Technology** **2020 – 2024**

- Thesis on a radar altimeter, covering radar and RF sensing.
- **Relevant coursework:** Object-Oriented Programming, Data Structures & Algorithms, Operating Systems, Embedded Systems, Assembly Programming, Databases, Network Management, Software Engineering, Web Development, Artificial Intelligence.
